

Hope Artificial Intelligence

Scenario Based Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

Yes, we can achieve this by collecting all the past data of the employees like salaries, promotions, performance reviews, achievements, attitude, behaviour and comparing it.

B) Find out the 3 -Stage of Problem Identification

1-stage → Machine learning

2-stage → Supervised Learning

3-stage → Classification

C) Name the project

Employee Retention status

D) Create the dummy Dataset.

Inputs

- 1) Employee Joining Date
- 2) Salary
- 3) Age
- 4) Experience
- 5) Job Satisfaction
- 6) Years With Company
- 7) Overtime
- 8) Projects Assigned
- 9) Hike Average
- 10) Promotions
- 11) Achievements
- 12) Performance ratings

13) Working Hours (Login/Logoff)

Output (Prediction)

- 1) Risk Profile
 - a) High
 - b) Medium
 - c) Low
- 2) Resignation status
 - a) Yes
 - b) No
